

How to enable the onscreen keyboard on Android devices.

Because Saveo Scan connects to your device as an external keyboard, the onscreen keyboard becomes disabled. This will guide you through the steps required to enable the onscreen keyboard when connected to Saveo Scan.

There are two options.

Option 1 - Flick the switch to disconnect the scanner. This is recommended only if you need occasional access to the keyboard. Please be aware, this method is for USB connections only and you will not be able to scan and use the keyboard simultaneously.

Option 2 - Switch off the hardware keyboard setting on your Android device. Disabling the hardware keyboard in system settings allows you to use the onscreen keyboard. This does not disengage the scanner and means you can now use the scanner and the onscreen keyboard simultaneously.

Option 1 - Flick the switch to "C" (for USB connections only)

If you only require access to the keyboard occasionally, a quick and easy way to enable it is to flick the switch on the back of the scanner to "C" (Charge Mode). Remember to flick it back to "O" (Operation Mode) when you want to return to scanning.

Please Note: This method only works when connected to the scanner over USB, to find out how to enable the keyboard when connected over Bluetooth, please follow the instructions below "Option 2 - Switch off hardware keyboard".

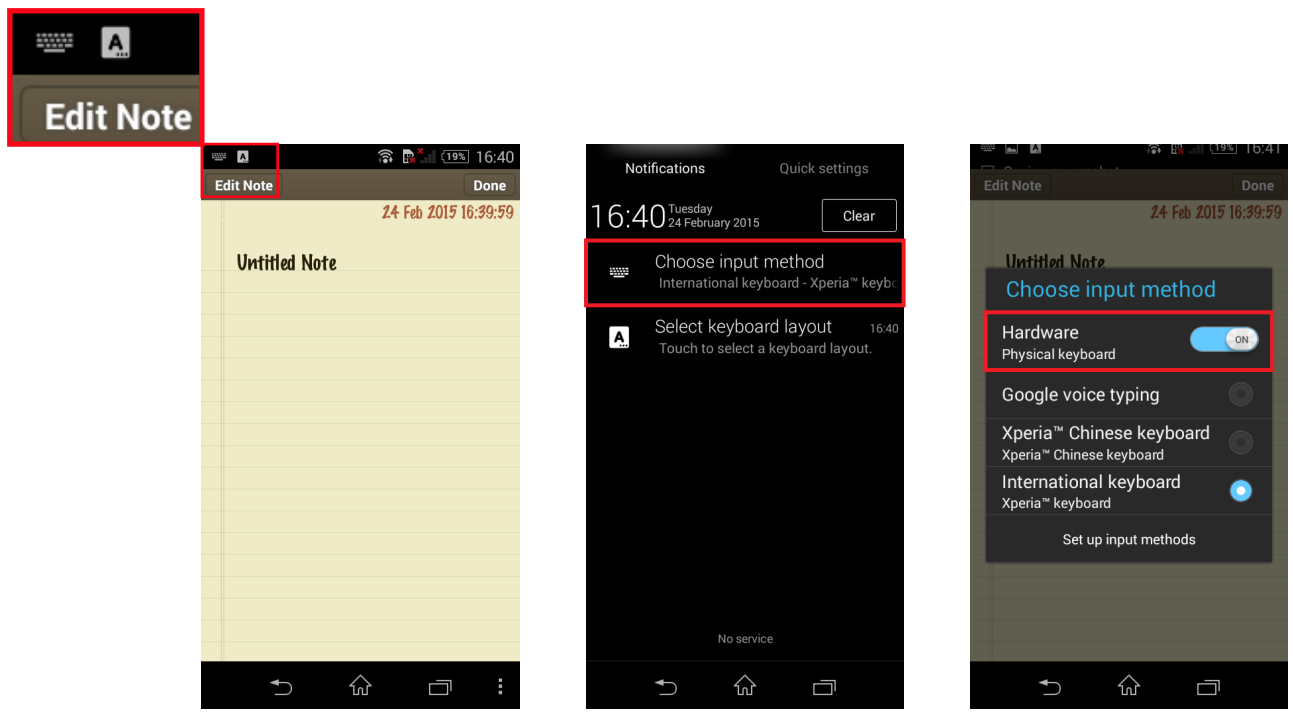

Option 2 -Switch off hardware keyboard (for Bluetooth or USB connections)

This method allows you to access the keyboard while scanning. Once enabled you can bring up the keyboard by tapping the screen and minimize it by pressing the arrow in the bottom left corner.

Please Note: The location of this setting can vary across different versions of Android as well as different makes and models of device. Below are examples the most common ways to access this

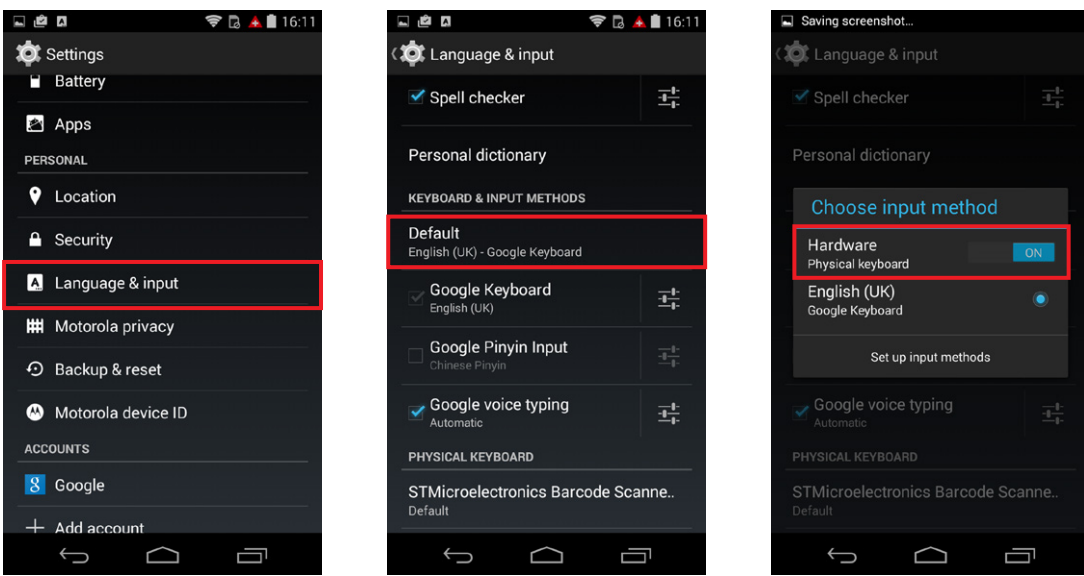

Notification Bar - On many devices, when the scanner is connected a keyboard icon will appear in the notification bar.

1. Drag from the top of the screen to bring up the notification bar menu.
2. Select "Choose Input Method" from the notification bar menu.
3. Turn off "Hardware - Physical keyboard" from the pop-up menu.

If the icon in the notification bar does not appear on your device please follow the instructions below.

1. Go to "Settings" and select "Language and input".
2. Under "Keyboard and Input methods" select "Default".
3. Turn off "Hardware - Physical keyboard" from the pop-up menu.

Tap the screen to bring up the keyboard.

You can now access the onscreen keyboard without interrupting your scanning. Tapping any editable text field will bring up the onscreen keyboard. You can still scan while the keyboard is enabled or it can be minimized by tapping the arrow in the bottom left corner of the screen.

Tap any editable text field to bring up the keyboard.

Tap the arrow to minimize the keyboard..
